Synopsis

Dynamic contrast-enhanced MRI is now established as the methodology of choice for the assessment of tumour microcirculation in vivo. The method assists clinical practitioners in the management of patients with solid tumours and is finding prominence in the assessment of tumour treatments, including anti-angiogenics, chemotherapy, and radiotherapy. Here, leading authorities discuss the principles of the methods, their practical implementation, and their application to specific tumour types. The text should is a single-volume reference that covers all the latest developments in contrast-enhanced oncological MRI.
