Discovering Biology In The Lab: An Introductory Laboratory Manual (Second Edition)

Synopsis

A lab manual that builds on the goals and themes in Discover Biology to make students more scientifically literate. Discovering Biology in the Lab cultivates the critical-thinking skills of non-science majors by constantly asking them to consider why they are doing what they are doing, how their experience in the lab connects to what they learn in lecture, and how they can apply these concepts to the real world. The best value for your students: Custom manuals cost just \$1 per lab when packaged with the textbook and just \$4 per lab standalone (7-lab minimum).

Tara A. Scully is the Supervisor of Biological Laboratories at The George Washington University, where she regularly teaches introductory biology courses and laboratories to nonscience majors. She received her MFS from The George Washington University, specializing in forensic science research with a concentration on fiber evidence, and is currently a PhD candidate with a research focus in developmental biology. She has worked for a nonprofit agency training prosecutors nationwide on how to present forensic evidence—specifically DNA—in criminal cases.

Not even the right book. The labs were completely different, it was just a complete waste of my money.

The book was missing pages. Like just complete missing 3 lab sections...RediculousWould not deal

with these people again.

It wasn't even the real lab book it was uncolored copies of the whole thing. I could of done that for free. Ill never order from again.
